ISO 9001 AS9100 ISO13485

Iso 9001 Consultants

Barile Consulting Services, LLC (BCS), established in 2005, specializes in ISO 9001, AS9100, ISO 13485 and ISO 14001 consulting for companies throughout the United States. ISO consulting has been completed for companies in Cleveland, Columbus, Cincinnati, Dayton, Atlanta, Chicago, Pittsburgh, Erie, Detroit, Jacksonville, Kansas City, Reno and many other areas throughout the country.

Today, ISO 9001 certifications have become standard for company suppliers as verification of internationally standardized qualification. An ISO 9001 certification enables companies to market themselves as ISO 9001 certified to attract new clientele, and qualifies companies to partake in project bidding.

Barile Consulting Services, LLC

Since starting the company back in 2005, BCS has implemented ISO 9001, ISO 13485, ISO 14001 and AS9100 for many companies in various industries within the United States. Every company consulted by BCS has passed their initial ISO certification audits as well as their surveillance (yearly) audits.

We do not have a HERE TODAY AND GONE TOMORROW attitude. Many ISO 9001 consultants assist companies to become certified and then move to the next company. Their objective is to implement ISO 9001 and have no interest with maintaining the system. BCS does not live by this approach. Proof is shown through the internal audit service. A requirement for companies registered to ISO 9001 is to perform internal audits. BCS has the capability and availability to offer this service for all of its customers. Many companies today use BCS for performing yearly internal audits.

AS9100C

AS9100C is an international management system standard for the Aircraft, Space and Defense industry. Complying with this standard provides organizations with quality products, be competitive around the world and meet regulatory requirements. The standardized processes enable companies to have a better quality reputation and secure international business.

AS9100C is developed from the framework of the ISO 9001:2008 quality management system. The system includes 100% of the ISO 9001:2008 standard. Thus, companies certified to AS9100C will also be certified to ISO 9001:2008.

One reason to implement and certify to AS9100C is that some customers may require it. Customers recognize the value of certified suppliers. Additionally, some industries require companies to evaluate and audit their suppliers. The requirement to audit these suppliers is often waived for AS9100C certified suppliers, thus saving the company money.

ISO 13485

ISO 13485 is based on the ISO 9001 format with additional requirements relating to design, special processes, environmental control, traceability, documentation records, and regulatory actions. The primary object of ISO 13485 is to standardize medical device regulatory requirements for quality management systems. As a result, it includes some particular requirements for medical devices but excludes some of the requirements of ISO 9001 that are not appropriate in a

regulated environment.

The primary difference between ISO 13485 and ISO 9001 is that ISO 9001 requires the organization to demonstrate continuous improvement, whereas ISO 13485 requires only that the organization demonstrate that the quality system is implemented and maintained. Thus many organizations maintain dual registration against both standards.
